-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

Claim 31 is objected to because of the following informalities: the term SMR is not defined in the claim. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bloomfield (US Pat. 3,976,507).

Bloomfield discloses a fuel cell power plant, which uses air and fuel in the cells. The power plant uses an autothermal reactor. Pressurized and effluent gases from the anode and cathode are used to drive the compressor and turbines. Waste gas from the anode is burned in order to heat the turbine gases. Catalysts are present in the inlet and outlet area of the autothermal reactor, that is, in the catalytic burner area (20) and the shift converter (18). Additionally, the steam required by the autothermal reactor is present in the cathode effluent gases. The autothermal reactor and shift converter may include the use of a selective oxidizer. Methane may be used in the autothermal reactor processing.

(abstract, figures 1, 3, col. 2, lines 32-35, col.3, lines 10-50, col. 4, lines 40-68, col. 6, lines 11-440

Bloomfield does not teach the integration of the autothermal reactor partially inside an oxidizer. Making elements integral was held to have been obvious. In re Wolfe 116 USPQ 443. Rearrangement of parts was held to have been obvious. In re Japikse 86 USPQ 70.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See US PTO-892.
